1848.

TAB. DCCLII.

SINAPIDENDRON VOGELII, Webb.

(Sect. Podocarpica, Webb.)

Ramis crassis nodosis, foliis rotundatis ovatisque crassis subtus nervosis pilis brevibus strigoso-hirtis margine dentatis v. demum crenato-dentatis basi integris cuneatis petiolatis, spicis basi hirsutis, calyce subsaccato-strigoso, petalis amplis flavis aurantiaco-maculatis? in unguem attenuatis, ovario lato gynophoro tenui triplo longiore, stigmate capito subsessili, siliqua—?

*Sinapidendron Vogelii.* Webb, *Spicil. Gorgon. in Hook. Niger Voy.* p. 100, Tab. II.

HAB. St. Vincent, one of the Cape de Verd Islands. *Vogel.*

The region, to which the genus *Sinapidendron* belongs, we have elsewhere called *Macaronesian*. The two species from the Cape de Verd Islands, differ from the Madeira and Canarian ones, in having a long slender support to the ovary and fruit, analogous to that of the *Capparideæ*. No other characters, however, of value, present themselves, so as to authorize their separation as a genus. *P. B. Webb.*

*Fig. 1.* Flower. *f. 2.* Petal. *f. 3.* Stamen. *f. 4.* Ovary:—magnified.
